Education

- **Indian Institute of Technology Ropar** *2017 – 2021*
  Bachelor of Technology; GPA: 7.3/10 Rupnagar, Punjab

Professional Experience

- **ABC Fitness Solutions India** *Mar 2025 – Present*
  Software Development Engineer II Hyderabad

Memberships & Operations

- Optimized a high-CPU **"get members" API** via **SQL rewrites** and **index-friendly filters** — improved **P50** latency by 20% and **P99** latency by 1000%.
- Initiated a weekly **cross-team tech-talk series**; scaled participation to 4–5 teams covering CI/CD, React testing, authentication flows, system integration, and distributed consensus.
- Fixed the **refund flow** so UI triggers only after **successful cancellation** and invoices reload correctly — eliminated **premature refund prompts**.
- Centralised retry logic using **Spring Retry** and **Spring Cloud Config**, moving backoff to config for easier ops control and improved observability.
- Led cross-team investigation to root-cause and resolve an **agreements queue mismatch**, reducing escalations and support overhead.
- Prevented **duplicate member creation** by adding validation, backend **dedupe** safeguards, and improved **logging** and **reconciliation**.

- **Beehyv Software Solutions** *Aug 2022 – Mar 2025*
  Software Development Engineer (FullStack) Hyderabad

IRIS

- Developed **JWT** based login for user authentication for the banking platform of Reserve Bank of South Africa.
- Developed password reset with email verification
- Designed a solution for seamless **OTP** integration with customizable settings and URL caching to enhance security and optimize user authentication across APIs. Used Plivo and Exotel for sending OTP, used Circuit-Breaker pattern Designed and implemented a robust OTP authentication system to enhance security and optimize API authentication. Integrated **Plivo** and **Exotel** for OTP delivery and leveraged the **Circuit Breaker** pattern to ensure reliability and fault tolerance
- Designed and integrated **XSS filter** to sanitize all inputs to the project
- Designed and developed a fault-tolerant **scheduler** microservice used by various teams
- Built **thread safe** APIs to generate Liquidity invoice and reimburse the amount using **Oracle Flexcube**.
- Developed dynamic **pdf-generation** for invoice download
- Developed comprehensive **unit tests (UTs)** and **integration tests (ITs)** to ensure robustness and reliability of all code modifications.

Beesheets

- Enhanced payroll reporting efficiency by **95%** through SQL optimizations.
- Developed the complete notification system based on **pub sub** model.
- Integrated **Keycloak** for secure user authentication and authorization. Also used **Keycloak Admin REST API** for role management and user creation.
- Designed entire backend workflow for employee onboarding. Used **Graph API** to generate new Microsoft users.
- **Dockerized** Beesheets deployment process, improving deployment efficiency and scalability.
- Developed user-friendly frontend features using **AgGrid**, developed custom column filters (available in paid version) from scratch with **Redux** and **SpringBoot**.
- Developed a generic filter drawer with interactive chips for active filters in **React**. Also built a generic monthRange selector using **Redux** from scratch.

Projects

–Http-Server-From-Scratch *Jun 2024 - Jul 2024*

- Custom **HTTP Parsing & Validation**: Parses requests with strict format checks, ensuring detailed error feedback. **Github**
- Multi-Client Support: Handles multiple client requests concurrently, leveraging **multithreading**
- Customizable Responses: Allows dynamic response configuration for status codes, headers, and content.
- HTTP Version Support: Ensures compatibility with different HTTP versions, flagging unsupported ones.
- Error Management & **Test Driven Developement**: Standardized errors (404, 500, etc.) improve client communication and debugging.

–**Log Monitoring Application** *Mar 2023 - Apr 2023*

Github

* Backend(SpringBoot) and Frontend(React) application to monitor an append-only log file
* Used **WatchService** to efficiently read the log file and **WebSockets** to communicate changes to the clients.
* Optimized the reader to handle extremely large log files (**100 GB**).
* **Multiple clients** can subscribe to the service with the option to play/pause the reception of logs while using a persistent websocket connection.
* **Reac**t app to connect to the service with **scroll-lock** feature similar to terminal. Also has **play/pause** button for logs.

Skills

Tech Stack:	**Java / Spring Boot, Spring Security, React.js, JSP**
Languages:	Java, C/C++, Python, JavaScript
Databases:	SQL — MySQL, OracleDB, PostgreSQL; NoSQL — MongoDB, Apache Cassandra
Tools & Platforms:	Kafka, Zookeeper, Docker, Kubernetes, OpenSearch, LaunchDarkly (feature flags), Linux, Git, GitHub
Dev & Infra:	CI/CD, Grafana/AppDynamics (observability), Tracing, Spring Cloud Config
CS Fundamentals:	Data Structures & Algorithms, Design Patterns, Object Oriented Programming, DBMS
Soft-skills:	Cross-team collaboration, stakeholder management, communication

Positions of Responsibility

•**Placement Co-ordinator**, Career Development and Placement Cell, IIT Ropar *Jun 2019 - May 2021*

•**Alumni-Student Coordinator**, Alumni Cell, IIT Ropar *Jun 2019 - May 2021*
